Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

Claims 33-54 are rejected under 35 U.S.C. 102(b) as being anticipated by Goetting et al. (US 5,365,125).

Goetting et al. discloses in figures 3, 4 and 20, a programmable interconnect bus (I1, I2); a plurality of logic elements (300, 310, 320, 330, 349, CCUs in CELL_1-CELL_9) configurable to perform logical functions; a plurality of tristate devices (341) coupled between the plurality of logic elements and the programmable interconnect bus; a plurality of programmable memory cells (see CCU4, CCU5 in fig. 20B; see col. 6, lines 34-36) coupled to the plurality of tristate devices to programmably enable and programmably tristate the plurality of tristate devices; and tristate control logic (output of 304 in fig. 20B) coupled to the plurality of tristate devices to dynamically enable and dynamically tristate the plurality of tristate devices.

Claims 33-54 are rejected under 35 U.S.C. 102(e) as being anticipated by Tavana et al. (US 5,682,107).

Tavana et al. discloses in figures 3A, 4A-4C, a programmable interconnect bus (TQ4-TQ7); a plurality of logic elements (F-J) configurable to perform logical functions; a plurality of

Art Unit: 2819

tristate devices (B4-B7) coupled between the plurality of logic elements and the programmable interconnect bus; a plurality of programmable memory cells (MM4-MM7) coupled to the plurality of tristate devices to programmably enable and programmably tristate the plurality of tristate devices; and tristate control logic (OR1) coupled to the plurality of tristate devices to dynamically enable and dynamically tristate the plurality of tristate devices.

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 33-54 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-48 of U.S. Patent No. 6239613 (hereinafter, '613). Although the conflicting claims are not identical, they are not patentably distinct from each other because claims 33-54 of the instant application and claims 1-48 of '613 recite tristate control logic coupled to the plurality of tristate devices to dynamically enable and dynamically tristate the plurality of tristate devices. The difference between claims 33-54 of the present application and claims 1-48 of '613 is that claims of the present application is only broader.
